Your gateway to Dutch data

Easy access to subsurface data on www.nlog.nl

Available data

Well data

- Digital well data, LAS/LIS data
- Well tests, production data
- Final well reports
- Stratigraphy

Seismic data

- 2D and 3D seismic data (including reprocessing) is available on request. Smaller data sets are downloadable free of charge. Large volumes such as 3D seismic data and paper copies sent by post are subject to minor handling costs.

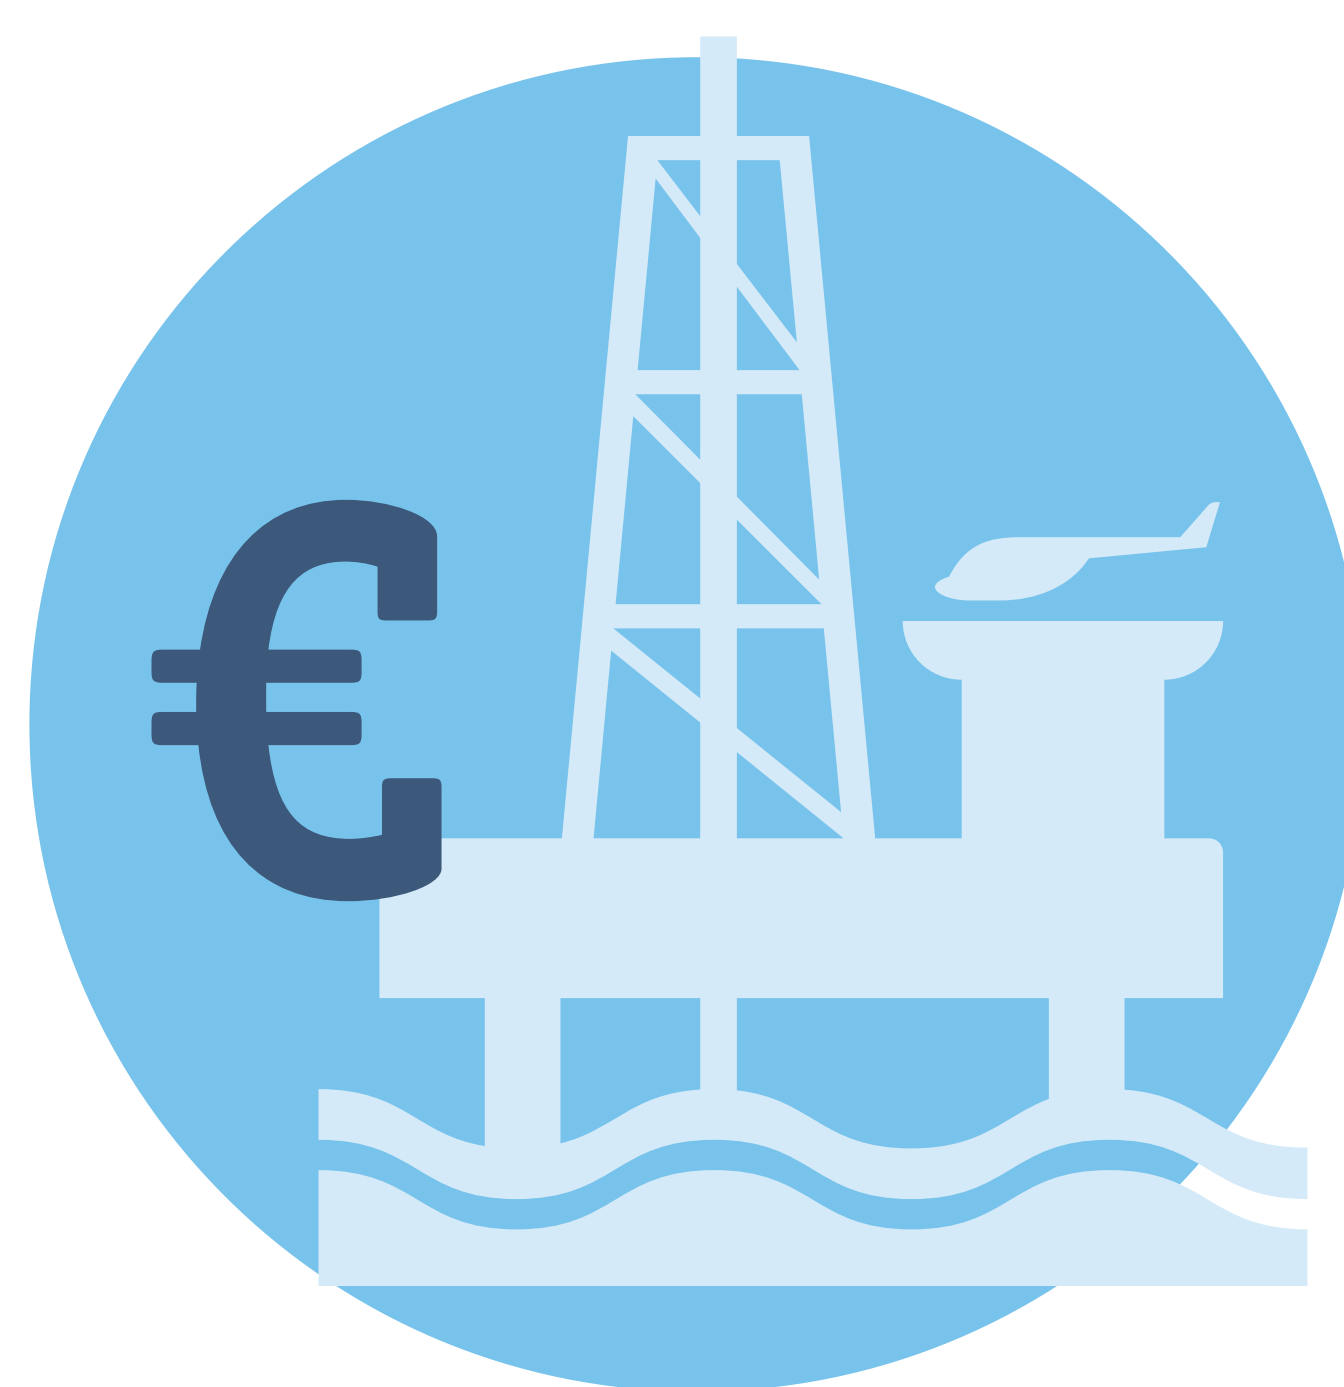

Gas/oil fields and geothermal data

- Information and data regarding production is available online. E.g. monthly production figures and production plans of all producing fields.
- Stranded fields are described in fact sheets

Other data

- Geothermal energy
- Salt production
- Underground Gas Storage
- Underground storage of CO₂
- Seismicity and subsidence
- Spatial planning of the Dutch subsurface

These data are available online and free of charge on www.nlog.nl after the legal relinquishment period (usually 5 years).

Investment climate

EBN participation

- Dutch government participates with 40% in exploration and production of gas and oil fields through EBN

Small field policy

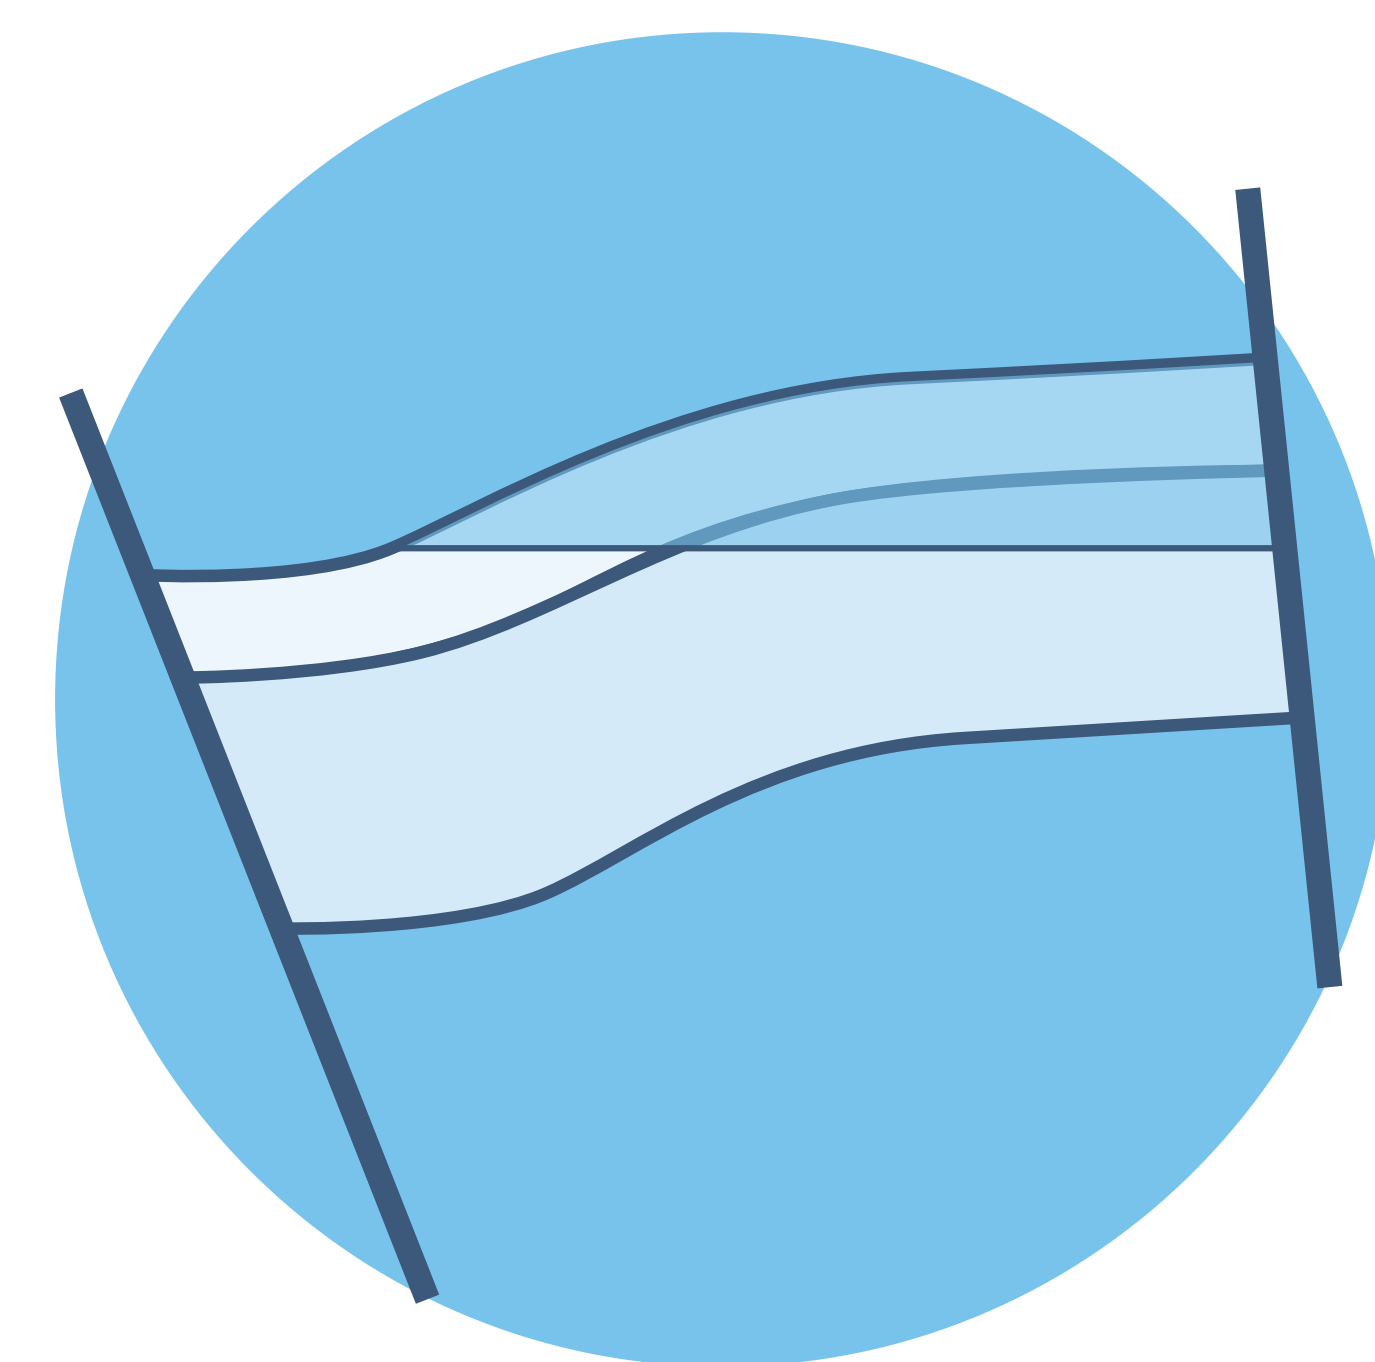

- The Dutch small field policy guarantees a buyer for the output from new gas fields

Geothermal incentives

- Warranty regulation - Drilling for geothermal energy is accompanied by risks. The drilling operation is costly and does not always yield results. A guarantee scheme was set up, covering the geological risks.
- Subsidy - The Dutch government has made a 4 billion euro subsidy available for 2016. Producers receive subsidy based on the amount of geothermal energy produced.

Legislation

- Easy online access to mining legislation
- Explanation and guidelines for reporting requirements
- Information on fees, taxes and state participation

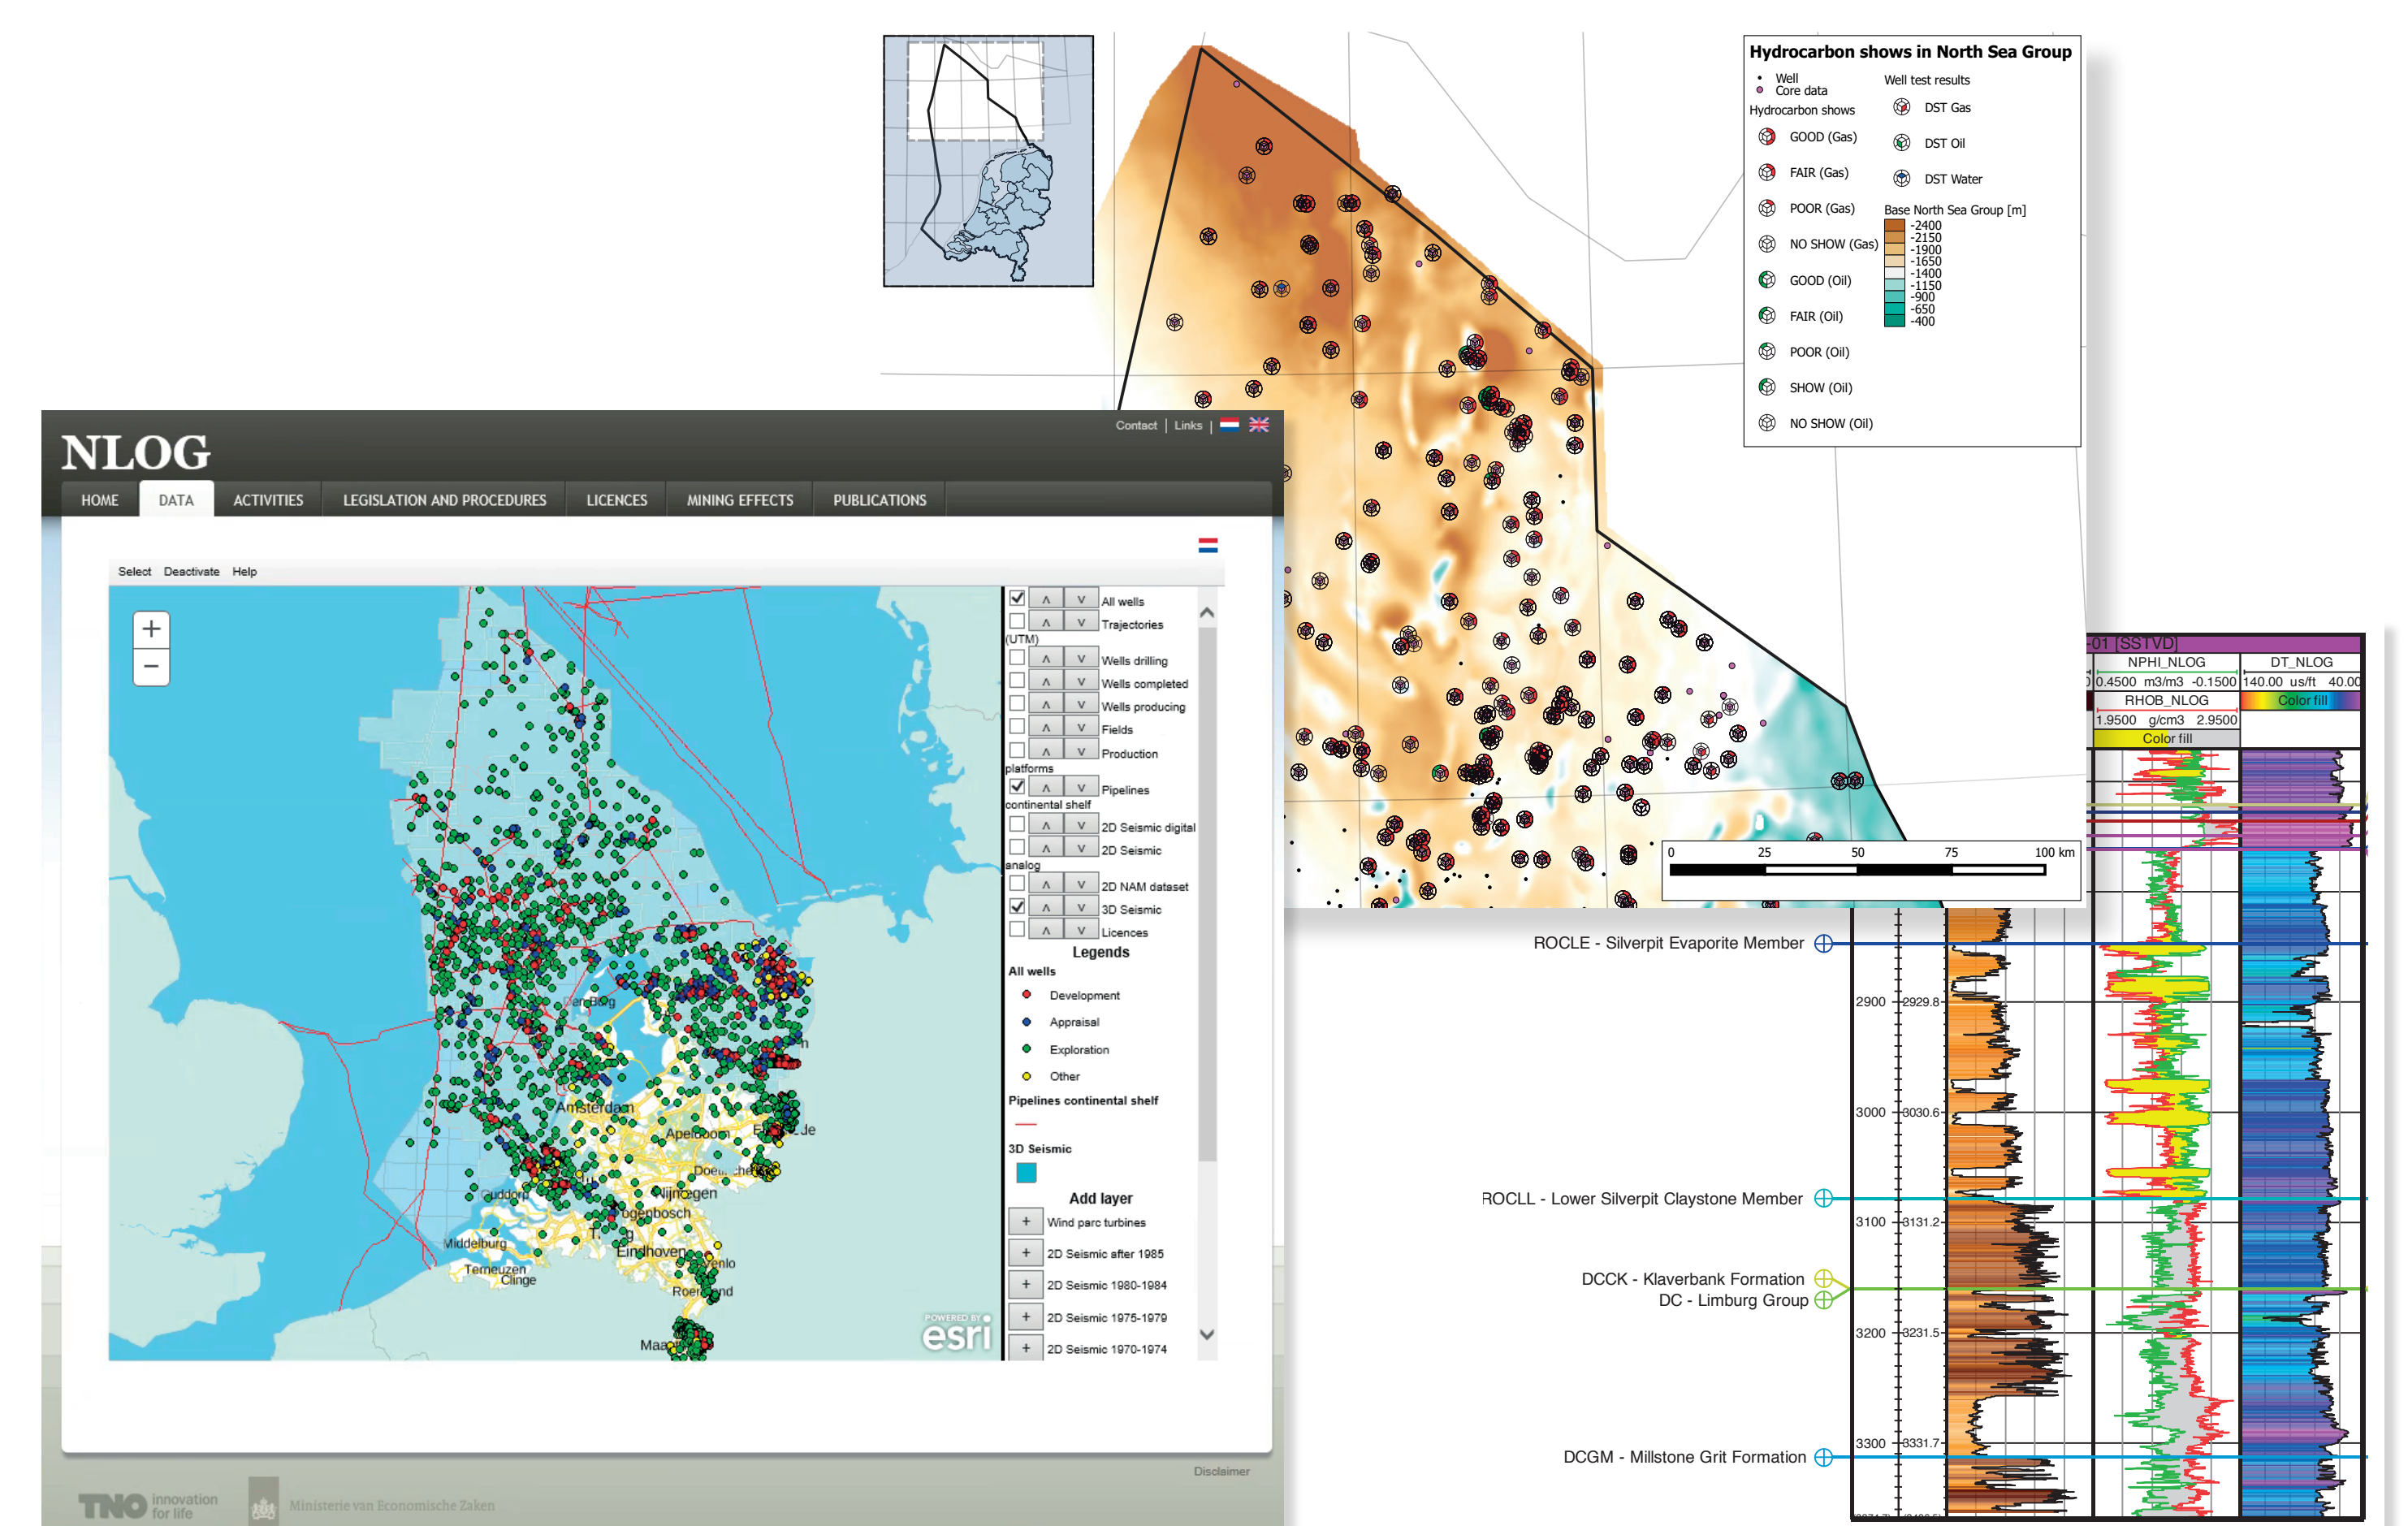

Interpretation

Maps and digital datasets

- Geology
- Oil & gas fields
- Thematic maps
- Regional velocity model for time-depth conversion
- Gas composition

Papers and presentations

- Annual review of natural resources
- Bibliography of Dutch geology
- Key publications on (petroleum) geology
- Reserves and production reports
