

# Netherlands Oil and Gas Portal

Your gateway to Dutch E&P data: [www.nlog.nl](http://www.nlog.nl)

## Introduction

The Netherlands is still an attractive and challenging area for the oil and gas exploration and production, albeit mature and with a long history of exploration and production. Since a few years the major E&P operators tend to migrate to other countries, releasing fields and blocks in the Netherlands that are not yet completely depleted or explored.

The current E&P situation in the Netherlands offers a challenge for companies that are at best when they can use their innovative, smaller scale power to extract the most from producing fields, cost efficiently develop tight and marginal fields, and for companies that dare to take chances on smaller prospects.

The Dutch government encourages independent operators to work in the Netherlands offshore and onshore area.

The Netherlands Oil and Gas Portal is the gateway to all E&P related data and information supplied by the government.

On [www.nlog.nl](http://www.nlog.nl) you can find, download or order:

### Data:

- Wells:
  - Composite well logs
  - Production data
  - Public domain well data
- Seismic: 2D and 3D seismic
- Fields: production plans
- Geological maps and models
- Digital datasets on e.g.
  - Gas quality
  - Seismic velocity data (VELMOD)
  - Maps as grid or as GoogleEarth files

### Information:

- Licences & Infrastructure
- Legislation, administrative procedures
- Fees, Taxes and State participation
- Technical and policy reports and publications

All information and data can be easily found or searched using a simple search form, or by using an interactive map interface.

For information on Exploration and Production issues and E&P data see the Netherlands Oil and Gas Portal [www.nlog.nl](http://www.nlog.nl)
